Survey of Sustainability in Education Abroad

2023

Table of Contents

Introduction

This report contains results from the 2023 Survey of Sustainability in Education Abroad. This survey is the first of its kind and the second survey administered since 2021 by the authors. The overall purpose of the survey, and subsequent report, is to solicit feedback from the higher education community in order to help the field of study abroad advance its sustainability knowledge, performance and impact.

Given the inherent global nature of education abroad, professionals in the field face unique challenges and opportunities with regards to how they respond to climate change and other environmental and social crises. Participation in this survey provides vital insights into how the field is evolving and how best to address these and other critical challenges. Specifically, the survey was intended to...

1. **offer state-of-the-field data on sustainability practices and policies,**
2. **benchmark these practices to enable comparative and longitudinal research,**
3. **incentivize continual improvement towards sustainable practices, and**
4. **inspire action to address the impact our field has on the climate crisis.**

Methodology

The 2023 Survey of Sustainability in Education Abroad was created and distributed by Bound International, LLC in partnership with Earth Deeds. Bound International, founded in 2020, is a small business navigating the intersection of international educational mobility, environmental sustainability and technological innovation. Earth Deeds, founded in 2016, offers innovative online tools for understanding and then transforming carbon footprints through supporting sustainability projects.

The SurveyMonkey platform, a product of Momentive, Inc., was used to collect the data. Questions within the survey included Likert Scales to scale certain responses, multiple choice options and some open-ended formats. There were 24 questions pertaining to sustainability in education abroad/student mobility and 8 questions pertaining to demographics and follow-up requests for 32 total questions. The average completion time for respondents was 17 minutes. Links to the survey were first distributed and advertised on March 1, 2023. After initially closing on April 5, 2023, the deadline was extended to April 15, 2023 to accommodate institutions that expressed an interest to either fill out the survey or complete partial survey responses. Links to the survey were shared via various online platforms including LinkedIn, SECUSSA listserv, NAFSA Network, Twitter, Facebook, the Association for the Advancement of Sustainability in Higher Education (AASHE) network, the AASHE Sustainability Tracking, Ratings, Assessment and Ratings System (STARS) community digest, the Community Colleges for International Development (CCID) newsletter, Gateway International Group and direct outreach to education abroad professionals that had expressed interest in the survey. Education abroad/student mobility directors, or those who have knowledge about Demographics, Office Management, Operations, Program Design, Student Learning and Perceived Barriers, were specifically targeted for survey completion.

Respondent names are kept confidential. No, or very little, identifying information about an institution or organization, is included in the report. Respondents were also given the opportunity to voluntarily share their contact information at the end of the survey in order to clarify a response, request permission to highlight a project or offer additional support.

Regarding the Longitudinal Assessment, a comparison of institutional/organizational performance is based on numerical values assigned to answers, weighted by importance, and tallied per indicator and overall. Those that indicated "N/A" or "blank" for an indicator in either 2021 or 2023 could not be measured for progress and, therefore, were excluded from each respondent's overall tally.

There were 103 colleges, universities and third-party providers that began the survey, but only 76 completed it. To provide consistency and avoid the confusion of fluctuating "n"s for each question, we only analyzed complete responses (n=76). The breakdown of responses per institutional, or organizational, type is listed in the Demographics section below.

Limitations

All data is self-reported. Institutions, or organizations, represented in both the 2021 and 2023 surveys may have had different individuals complete each survey which may affect the results of that institution's, or organization's, reported overall sustainability performance for each survey as well as the demonstrated progress, or lack thereof, from 2021 to 2023. The majority of messaging and advertising about the survey likely reached more North American and European higher education audiences, though extended efforts were made to reach other geographic regions. Seventy-six respondents are also not a representative sample of the approximately 25,000 colleges and universities throughout the world – a majority of which have study abroad, or student mobility, opportunities for their students.

Comparison with the 2021 Survey

- For the inaugural 2021 survey, there were 81 colleges, universities and third-party providers that began the survey with 77 completions.

- Twenty-four institutions/organizations completed the survey in 2021 and again in 2023.

- The Anticipated Additions from the 2021 survey report were addressed, including targeted outreach to key organizations to provide feedback and visibility to the survey (e.g. Forum on Education Abroad, Association of American Colleges and Universities (AAC&U), Asia-Pacific Association for International Education (APAIE), Climate Action Network for International Educators (CANIE) and Association for the Advancement of Sustainability in Higher Education (AASHE).

- In 2023, more than 350 international educators from every world region were personally invited via email to complete the survey in March and April 2023, many of which are NAFSA members.

- The 2023 survey was made available in 4 languages (versus just English) including English, Spanish, French and Chinese (simplified), though only 2 respondents completed the survey in a language other than English.

- Ten strategically-selected individuals from 10 different countries in Europe, Latin America, Oceania, North Africa and the United States were asked to provide feedback on terminology used within the survey in January 2023 in an attempt to use appropriate terminology for an international audience.

- After soliciting for interest in July 2022, 33 individuals participated in a review of the 2021 survey's utility and content via two virtual sessions in August 2022 and an online questionnaire.

- In addition to the "other" open-text option affiliated with several multiple choice or Likert Scale questions, 3 additional open-ended questions were added to the 2023 survey to allow for unique information to be shared outside of the pre-established questions.

- Those that completed the 2021 survey were directly invited to complete the 2023 survey in order to allow for longitudinal analysis.

- Many results within the 2023 report are presented in relation to institutional type, unlike the general data presented in the 2021 report.

Anticipated Additions the Next Round

As a result of the data and feedback within the 2023 Survey of Sustainability in Education Abroad, the following changes and inclusions will be considered for the next iteration of the survey:

- Repeat the most successful outreach initiatives observed during the 2021 and 2023 promotional cycles

- Partner with a large international education membership-based organization to co-produce and co-promote the survey

- Solicit more targeted feedback institutions, or organizations, from the international education community that are more highly engaged in sustainability versus general feedback for future surveys

All changes and inclusions will be considered on the basis of whether or not they will make the survey more accessible, appeal to broader audiences and/or yield more critical and actionable data.

Executive summary

In addition to a "code red for humanity" issued by the U.N. Secretary General in 2021 along with the warning that Global Warming is dangerously close to spiraling out of control, the World Meteorological Organization (WMO) recently stated that global temperatures are likely to surge to record levels in the next five years, fueled, in part, by heat-trapping greenhouse gases. This is in addition to the fact that twenty-one of the hottest years on record on the Earth have occurred since 2002 and anywhere from 25-30% of global GHG emissions come from the transportation sector. Every sector of society must respond and adapt to this existential crisis, and this includes academia and education abroad (also known as student mobility or study abroad).

As colleges and universities are increasingly embracing sustainable practices and policies, study abroad offices and programs are left struggling to address or keep pace with necessary changes, including being invited to take part in institutional strategies and reporting on the issues pertaining to sustainability.

Demographics

Of the 76 completed responses that we received for the 2023 Survey of Sustainability in Education Abroad, thirty-three were from public universities, twenty-four were from private universities, nine were from community colleges, nine were from third-party provider organizations and one was from a technical college. Seventeen countries were represented with the majority (56) from the United States. A majority of survey respondents were sending under 1,000 students abroad per year, regardless of program duration. Most respondents managed some or all education abroad programs at an institution of higher education, followed by those who managed all international affairs at an institution or higher education.

Management and Operations

While most respondents are embedding environmental sustainability into their administrative goals and policies, only one-third of them feel as though they are achieving these goals.

Regarding travel emissions, only about one-quarter of respondents are tracking flight emissions for either students, faculty or staff and 66% of respondents do not track flight emissions for any traveling population. Even fewer respondents are tracking ground emissions (e.g. car, train). Only eight respondents are utilizing some type of carbon tax and most take advantage of carbon offsets (versus charges or credits). All but one retain the fees that are collected based on emissions rather than direct to an outside investment. Only 14% have travel-related emissions being tracked by the education abroad office and/or in partnership with the sustainability office, while more than half indicate that no one is responsible for this. The lack of emission tracking overall is problematic because this is the most common form of quantified data regarding the impact of travel and it is critical to measurement, targeting and accountability.

Program Design

A majority of respondents are not engaged in intentional, sustainable design for their education abroad programs, whether it is selecting sites, vendors, food choices, accommodations or flight paths that are more sustainable, or infusing sustainability into the curriculum. For example, only 16% of respondents are choosing travel destinations based on sustainable practices and lower CO_2 emissions and 80% of respondents or more indicate that 25% or less of their education abroad programs include themes such as "Environmental Sustainability", "Social Sustainability", "Climate Change" or the "U.N. Sustainable Development Goals". For those that are mapping their education abroad curriculum to the SDGs, most are mapping to Goal #4 (Quality Education) and Goal #13 (Climate Action).

Co-curricular programming is also underperforming regarding the implementation of sustainable practices. Only 22% of respondents address the SDGs in pre-departure orientations or materials and only 37%

address the climate crisis or carbon emissions. While most respondents advocate for sustainable travel choices while abroad by their institutions or organizations, most of them (57%) do not actively incentivize students to be eco-friendly travelers. Once students return home, most are not provided or directed towards events or opportunities to engage in sustainability-oriented dialogue or programming. This may be due, in part, to the fact that many institutions and organizations struggle to execute effective re-entry programs in general.

While most respondents (61%) utilize local faculty at sites abroad to teach students and 79% indicate that they co-design their programs with locally-based partners and vendors, most are not engaged with communities abroad in other ways. For example, only 37% of respondents utilize goods and services that are locally-sourced or eco-friendly and only 38% are contributing to local assets (schools, health programs, conservation projects, etc.) via their programs.

The biggest perceived barriers to implementing sustainability within education abroad programming, according to respondents, are Staff Time (54% state it is "Very Much" or "Much" of a barrier) and Funding (47%) while the lowest perceived barriers are Supervisor/Boss interest/commitment (14%) and Institutional/Organizational interest/commitment (21%). This is similar to perceived barriers reflected in the 2021 survey results.

Institutional Comparisons

Public and private 4-year universities are generally performing higher than community or 2-year colleges regarding sustainability performance and inclusion. They are also performing at similar rates with each other, though a slightly greater proportion of private organizations (universities and third-party provider organizations) are more active in general, similar to results from the 2021 survey. While not for certain, this may be because private organizations may have more freedom to allocate internal resources. Short-term programs (<9 weeks) are promoted more frequently by community colleges, private universities and third-party program providers and this may reflect a stronger tradition of semester exchange programs at public universities. Public universities

are offering more sustainability-oriented curriculum on their education abroad programs by having a higher proportion (50%-75%) of these themed programs versus other institutions. However, community colleges show stronger performance in areas pertaining to reducing global inequalities (e.g. SDG Goal #10 in the curriculum, 56% are offering virtual exchanges to compensate for lack of travel by students, and 56% are conducting pre-departure programming that includes topics about local and global social and environmental impacts of program participation and cultural tourism and educational colonialism).

Longitudinal Data

There are not any significant performance indicators from 2021 to 2023 that are unique to a certain institutional or organizational type overall. A community college located in New York, U.S.A. demonstrated the most progress regarding sustainability performance between 2021 and 2023 while a public university in California, U.S.A. demonstrated the most regression. The largest variance, including the range of scores, in progress vs. regression (i.e. the most amount of change) is with regards to perceived barriers to implementing sustainability into programming and the smallest variance (i.e. the least amount of change) are efforts to track both flight and ground emissions by students, faculty and staff. Sustainability performance increased, but by less than 10% overall, amongst repeat respondents from 2021 to 2023.

Conclusions

There are significant variations in sustainability performance by institutions of higher education and third-party provider organizations that facilitate study abroad opportunities for college and university students. There are also variations in performance by these institutions and organizations over time, with both progress and regression taking place in individualized ways for specific activities. By most measures within this report, institutions of higher education and third-party program providers of study abroad programs are under-performing, but showing signs of improvement. It is critical that the field of international higher education, and its allies, continue to prioritize a sustainability ethos within programs and the profession.

Demographics

FIGURE 1: TITLE/POSITION (select the option that best describes what you do)

Manage all sustainability efforts at a college/

OPEN QUESTION

1 If applicable, please list (or summarize) environmental sustainability references within the **organizational mission, goals and objectives**.

"

University values:
"Honesty and Integrity: We uphold truth, honesty, and integrity, fostering personal and collective accountability by stewarding our resources well and cultivating an awareness of our responsibility for the environment and the communities around us. Strategic Plan 2021-26: "We envisage a green, vibrant, and exciting campus. We commit to reducing our carbon emissions. Working without paper will play its part. Our curriculum will align with the United Nations Sustainable Development Goals. This means that all our degree courses will include education for sustainable development." **[Public university]**

Commitment to sharing information about environmental sustainability with students, faculty, and staff. **[Public university]**

Our environmental policy encompasses sustainable travel and program operation, ethical service-learning opportunities, company-wide sustainability practices, and more.
[Third-party provider organization]

To empower individuals and communities to take action in their personal and collective lives in helping to contribute to a sustainable, equitable, and peaceful future. **[Third-party provider organization]**

"

"

[Our college] prepares and empowers entrepreneurial leaders who create, grow and steward sustainable economic and social value—everywhere. **[Private university]**

Environmental sustainability isn't explicitly stated in our mission but is sort of inferred by referring to inspiring students "to grapple with challenging questions about themselves and the world... and foster inquiry, equity, and agency necessary for them to practice ethical citizenship" abroad, etc.
[Private university]

We are a signatory to the CANIE Accord (44 actions). **[Third-party provider organization]**

Yes, environmental sustainability is part of the organization development plan. **[Private university]**

The closest we get to this is promoting the "critical study of global issues". **[Private university]**

Become carbon neutral by 2030, add a new Environmental Sciences major. **[Private university]**

Hardwired into the University 2030 strategy. **[Public university]**

[Provider] is a transnational nonprofit that empowers isolated communities to grow sustainably through financial and technical assistance funded by international education travel. Our Mission To provide international education programs that support the education, conservation, and social development of isolated communities by assisting local institutions in sustainably handling the human-environmental intersection. **[Third-party provider organization]**

The mission of [university] is to train qualified professionals, ethically committed and with a sense of humanity to moving towards the sustainability of institutional development; carry out research aimed at preventing and solving complex challenges global, national and regional; preserve, revalue and disseminate art and culture, as well as extend scientific and technological knowledge, in order to contribute to the full deployment of the potential of the country and the state from Veracruz. For this, the University fulfills its responsibilities with transparency, austerity, accountability, social relevance and adherence to legality and human rights that ensure the effective performance of its substantive functions. Institutional policies: Guarantee the mainstreaming in the substantive and adjective university functions of human rights and sustainability, through the promotion of a culture of peace and non-violence, the legality, gender equity, substantive equality, inclusion, non-discrimination and interculturality, as well as through the fight all kinds of violence.
[Public university]

We are using a building that was designed to government resources and are not used since the 70s thus we are remodeling all building as an environmental one. **[Private university]**

"

"

About [international studies office]: "We are a multidisciplinary team that promotes programs and projects under the scheme of our Smart Campus … vision. The [international studies office] promotes transversal actions in the university along the axes of campus, community, culture, curriculum and research. We contribute to the generation of social innovation with our external environment and catalyze innovation processes within the institution." About the Climate Action Plan: "[university's] Climate Action Plan aims to unite our operational, academic and research departments to coordinate campus wide climate initiatives. The action plan is divided into the following topics: Energy and Carbon emissions, Operations, Procurement, Nature and Ecosystems, Community and Partnerships, Implementation, and Reporting. **[Private university]**

The Environmental Collaboratory seeks to co-fund, co-design, and co-implement replicable, transdisciplinary on-the-ground solutions with community partners that drive systemic change and align climate transition and environmental justice with the needs of our communities. The Environmental Collaboratory is centrally positioned in the Office of the Provost of [university] to facilitate the expertise in environmental sciences, engineering, data, law, health care, public health, policy, social sciences, and humanities and the capabilities of its faculty, researchers, staff and students. **[Private university]**

Our new vision for [university] is to achieve carbon neutrality by 2040. This goal includes achieving carbon neutrality for all of [university's] scope 1 emissions, scope 2 emissions, and the following scope 3 emissions: student and employee commuting, waste, and business travel. This plan also updates [university's] intermediate emissions reduction targets with goals to reduce emissions from the 2007 baseline by 51% by 2025, 64% by 2030, and 73% by 2035. Students, faculty, and staff will be engaged in the efforts to achieve these goals. **[Public university]**

In our most recent strategic plan, there is reference to Sustainability and Climate Action as a key strategic priority. **[Public university]**

Carbon Conscious, Protect the environment, minimize our carbon footprint and create a wider positive impact by embedding carbon consciousness in our programmes, In a sector which contributes to a lot of carbon emissions through international travel, we believe it's our own responsibility to make a positive impact, through climate education and taking action, as individuals and a community. **[Third-party provider organization]**

We added sustainability as a core value to our mission statement. **[Public university]**

Very poor references within our mission statement, limited to retrofitting some buildings. **[Private university]**

The college has a signed climate action plan and has started to implement, gather data. **[Private university]**

Sustainability at [college]: We advance sustainability and just climate solutions through our operations, education, research, and community engagement. The Sustainability Working Group seeks input to update our next climate and sustainability commitments. [weblink]. **[Private university]**

"

"

Part of the institution's strategic plan: Ensure that our students develop the knowledge and skills to become responsible leaders Increase knowledge generation and transfer activities in corporate social responsibility, sustainability and ethics, develop best practices in corporate social responsibility, sustainability and ethics within our organization. **[Public university]**

None. **[Private university]**

a strategic plan to guide the college through 2025. The plan identifies several priority areas where we pledge to devote substantial time, focus and resources in order to spark growth collegewide. In doing so, we look to strengthen our footing while preparing all Terry students to succeed in four main areas: analytics, innovation, leadership, and sustainability...Plans for college's Sustainability Initiative include hiring faculty, expanding course offerings, launching a new undergraduate area of emphasis in sustainable development and supporting new experiential learning opportunities. **[Public university]**

From Strategy doc: Vision (2030) We will be internationally recognised for our unique contribution to fair, ethical and sustainable societies. **[Public university]**

Internationalization at home is practiced, we have high ranking in Green Metrics too**. [Private university]**

Our campus, and office, abide by and strive to meet all SDGs. **[Public university]**

University strategic plan has "building a sustainable future" as one of 6 main pillars. University carbon reduction task force issued report in 2022 that is being implemented now. **[Public university]**

Goal: all students have a Environmental Sustainability module pre-departure. At least one sustainability-focused faculty led program every year. **[Private university]**

Commitment to Sustainability We recognize that the future of study abroad, domestic study away, and international internship programming requires a commitment to sustainability. We are devoted to examining, developing, and improving sustainability in all our endeavors, aligning with campus priorities and following through with [university's] climate action and resilience commitment. To do this, we are partnering with the [university's] Office of Sustainability. Our work will be informed by scientific and professional expertise. Active learning will be required by our staff, the students and faculty we serve, and our domestic and international partners. Our efforts work toward the mutual benefit of program participants and host communities, and the responsible management of finite planetary resources. **[Public university]**

Regarding Study Abroad - N/A at this time. **[Public university]**

"

OPEN QUESTION

2 If applicable, please list (or summarize) environmental sustainability references within the **job responsibilities, roles and responsibilities of office/unit staff.**

"

Some commitment to using less paper in the office, but not widespread. **[Public university]**

I tried unsuccessfully to get sustainability written into my job description. **[Private university]**

I don't have full-time employees, just contractors but all contractors are people working within the field of climate action/sustainability or who are qualified in a related field. **[Third-party provider organization**]

Job responsibilities, roles and responsibilities of office/unit staff must be aligned to development plan and all environmental sustainability actions or policies. **[Private university**]

Reference to it made in all job descriptions as part of the dimensions of the role. **[Public university]**

Use of the resources and material are complete oriented to environmental perspectives. **[Private university]**

As an Education Abroad Advisor, my role has incorporated creating ethical and sustainable travel pages and resources for students going abroad, as well as incorporating these materials into pre-departure orientations. **[Private university]**

The office aims to use as little paper as possible, use energy star electronics, save energy, and be a green office. **[Public university]**

Ensure a fantastic participant experience; with a focus on professional and personal development, climate education and cultural exchange Be Global & Local - Bring your unique experiences, culture, and knowledge to the role, and share it with the Pagoda team and our participants. We are encouraging everyone to engage in a global growth mindset to abide by company SOPs and company values Mentor the wider team on your local culture, things to do, hidden gems, and cultural considerations. We want to learn from you! **[Third-party provider organization]**

It has been added to job responsibilities for some of our staff members, and our intention is to make it a teamwide responsibility/focus. **[Public university]**

None **[Private university]**

Education Abroad is part of the college's climate action plan signed in 2021. The college's plan intends to reduce greenhouse gas emissions 50% by 2026. **[Private university]**

None. **[Third-party provider organization]**

Internationalization at home strategies are implemented - 40 COIL groups etc. **[Private university]**

Additional examples of how sustainability is addressed at different geographical sites for education abroad programs by your institution/organization and/or local partners.

> See our recent blog that shares sustainability practices in place during programs/travel abroad. **[Third-party provider organization]**

Everything is conducted virtually but our internship host companies are located across Asia and Europe, and the [provider] students develop a climate action plan for their hosts. **[Third-party provider organization]**

Note: [University] does not run any of its own programs. We rely on program partners (e.g. SIT, SFS, DIS, IES) to determine these goals for their own programs. **[Private university]**

DIS has local "slow" travel correspondents, most programs have local faculty, SIT has locally-purchased goods, SFS has environmental themed programs, partnership with our environmental studies department to promote their chosen programs. **[Private university]**

"In Argentina, it will be the theme of the program, so we will study the local ecosystem at partnership with the university in Córdoba and work with a community reforestation organization. **[Technical college]**

[University] has embraced a social responsibility towards urban and rural communities in disadvantage and intercultural regions within the state of Veracruz. It generates the conditions in which it can contribute, in collaboration with different parties, to the sustainable development of society through a variety of engagement and outreach programmes, for public, productive and marginalized sectors, while fostering personal and professional training in real social contexts. **[Public university]**

This is going to be implemented more in our programs after the Sustainability Committee finishes its initial goals and develops steps to include these items. **[Public university]**

"Sustainability is mainly addressed with a key few programs. Students are informed of different cultural norms based on the area, and the students and faculty work with local partners/vendors to assist with access to clean water, cleaning litter, building a safe place to stay, and more. The goal is to assist the area to be sustainable and safe. **[Public university]**

Where possible, we partner with a local partner to assist with program development and implementation and request when possible to use local vendors. In larger locations, group transportation primarily uses public transportation. Where this is not possible, faculty groups are encouraged to limit long distance excursions and focus on local experiences. **[Private university]**

For exchange programs, the support activities are largely determined by our partner's responses to the Climate Crisis, which are often more advanced than our own. **[Public university]**

Carbon Literacy training, slow travel, sustainable research projects, sustainable destinations (Brussels, Amsterdam, Bangkok), sustainability/SDG-themed field trips and educational experiences, sustainability and carbon conscious pledges, themed skills courses including intercultural awareness and fluency, awareness of sustainable business practices, sustainable accommodation and food, carbon offsetting.
[Third-party provider organization]

One example: Stay Local Abroad weekend in Rome, Feb. 2023. Students encouraged to stay in Rome and not welcome travelers from elsewhere. Examples of events offered included: lecture on green-washing, community clean-up event, wine-tasting, city run/walk, recycled art project, etc. **[Public university]**

Our Dublin campus is making strides to embed sustainability and climate action. It is included as a topic during orientation, we encourage overland travel as opposed to flights, we have field trips on sustainable themes, we practice active offsetting with the students, and we track emissions. The science class (taken by about 60% of students) has been reworked to focus on climatology and climate change. We partner with a local charity for active offsetting (tree planting and ecology education). **[Private university]**

Accommodation close to the training site, use the shortest, least expensive routes, carpooling and/or public transport on site." **[Public university]**

In the cities where sustainable business is the topic, we visit 'B corporations', of other company's visited we ask about ESG strategies, that sort of thing. Students learn about the importance of natural resources to business (water, power, etc.) as well as human resources and social justice (living wages and benefits, reliable work, safety, etc.), corporate greenwashing, corporate social responsibility, etc. **[Public university]**

We have not yet taken an inventory of this. Hoping to do so in the future. **[Public university]**

Arava Institute: The Track II Environmental Forum was initiated in 2016 to enable key civil society organizations and individuals who represent both state and non-state actors to discuss, negotiate, and develop practical cross-border strategies to facilitate formal and informal environmental agreements between Israel, Palestine and Jordan. The concept underlying the Track II Forum is a departure from traditional peace-building efforts in the region (Track I), which have aimed to establish over-arching peace agreements. We believe that by promoting initiatives taken at the professional level, we can catalyze positive change on the ground and in the political arena. **[Public university]**

On one program, students calculate carbon impact of various itinerary options (housing, meals, transportation) and then vote on which options to choose. For example, they recently chose national park tent camping over hotel. Another example – we implemented our inaugural Stay Local weekends to incentivize students NOT to travel on specific weekends. They could win one of twenty $100 USD grants to spend in their host city. We also partnered with local staff abroad for activities in the city like neighborhood clean ups, lectures on local sustainability, etc. And all students received info on making more climate conscious travel choices for future weekends. **[Public university]**

TOTALS	39	15	17	1	4	76

51% are very much interested in making study abroad more environmentally sustainable.

LIST 1. In your opinion, what is needed by your office to build, or enhance, sustainable study abroad efforts?

Incentivise staff **[Public university]**

More time and an increase in staff :)
[Public university]

Institutional and Study abroad commitment to change SOPs at home. **[Private university]**

More examples from peer institutions to benchmark from, concrete information – I feel that many of us simply do not have the expertise
[Private university]

A better way to collaborate and share ideas across countries and cultures. Funding for student incentives. More dedicated staff time to devote to this topic.
[Third-party provider organization]

time and funding **[Private university]**

Consistent funding from government mobility grants.
[Third-party provider organization]

We really should be throwing our weight behind data collection and possibly outsourcing to consultants, when possible. Funding is not earmarked for these purposes, but I think that we can start with our legacy semester-/year-long programs with getting some of the items from the previous list going.
[Private university]

a full time study abroad coordinator
[Community college]

Resources – time, expertise, and funding
[Public university]

Given that we are a community college, we would need to have access to AFFORDABLE sustainable study abroad opportunities, otherwise the cost will be prohibitive for our students. Additionally, our office could benefit from training in how to develop sustainable study abroad programs and increasing the staffing in our office to aid in the development of sustainable programs. **[Community college]**

More time and institutional commitment
[Private university]

We need a more robust study abroad program all around and more institutional support.
[Technical college]

Better prepared professors, staff, students on the topic of sustainability and equal commitment and efforts on the topic from local and partner institutions.
[Public university]

internal knowledge and a sustainability office that has more resources to help us. **[Private university]**

We have the committee underway to overhaul and enhance efforts by our office and our programs moving forward. **[Public university]**

We need more time to develop the activities
[Private university]

Feasibility **[Community college]**

I believe that in order to begin to move towards initiatives that have sustainability at the center of outbound mobility, it is essential to include it in planning and explore the different ways in which our programs connect to these objectives. There are institutional objectives with respect to sustainability; however, there is a lack of greater socialization with the different areas and perhaps more training and guidance with respect to the relevance of these issues in our areas for institutional development and integration.
[Private university]

An institutional commitment to both study abroad and sustainability. **[Public university]**

More resources to know what sustainability practices can be implemented in study abroad efforts, and funding to account for some increased costs (especially with airplane emissions). **[Public university]**

Institutional support and buy in. Currently the University of Richmond has a climate neutrality date of 2050 and has not yet made sustainability one of its strategic goals. This would allow for larger moves across campus rather than departmental efforts. This may also free up additional funds to support these types of changes and would indicate the university body that this is a priority goal. **[Private university]**

More staff time; more senior leadership; more funding to support sustainable choices. **[Public university]**

Implementing the sustainable measures of our SGE program into our other global programs. **[Third-party provider organization]**

time and interest [Public university]

More of a university-wide buy-in to making changes, funding, staff time **[Public university]**

A broader commitment on how sustainability is a factor not just for facilities but for all academic and service areas as well. **[Community college]**

In my own institution, simply awareness and bravery to confront an issue that might jeopardize our model of education. **[Third-party provider organization]**

The college needs to take it seriously, but I fear there are other socio-cultural initiatives that take up all of the available bandwidth, notably DEI. **[Private university]**

recognition of donors and those supporting student travel of the importance of this issue-- less focus on just funds for fun/exploration/"getting lost", must have greater focus on the environmental impact and the responsibilities that come with travel **[Private university]**

A clear vision of what we are striving towards as well as the resources that can help to bring us there. **[Public university]**

To further promote international seminars, courses or trainings on SD. Dev. **[Public university]**

Time to devote building programs consistent with SDG's **[Public university]**

Our next step is to collab with office of sustainability, and conversations are moving in that direction. **[Public university]**

staff time to be able to develop and implement a plan **[Public university]**

Time! **[Public university]**

I am replying from the Mexican point of view - we are already practicing sustainability efforts - we hope are partners are also doing this. If we want to be MORE sustainable, I'd prefer more promotion on internationalization at home and less focus on study abroad **[Private university]**

Research support! **[Public university]**

Including sustainability as an office goal/mission. **[Public university]**

Resources and knowledge **[Public university]**

Time!! Staff time!! The interest is there from faculty, staff and students. We just need more time in the day! **[Public university]**

Devoted staff and resources **[Public university]**

More guidance and options to consider when faculty are building their programs abroad. **[Public university]**

Kudos to you for taking on the work of this survey – it is much needed! **[Third-party provider organization]**

The world needs more knowledge and awareness on the topic sustainability in education abroad. Thank you for this survey. **[Public university]**

We run a variety of programs for our university partners. This includes in-person/online internships and Sustainable Global Experiences (SGE). For the purposes of this survey, we have focused on our SGE programs. **[Third-party provider organization]**

Honestly we have very little left of our study abroad work post pandemic so this is a big lift in many ways. **[Community college]**

Appreciate the work you two are doing on this front. **[Public university]**

I think it's interesting comparing short-term program vs. longer program impacts on the environment! Our campus pushes short-term faculty-led programs a lot, but I like the idea of highlighting how longer programs are environmentally and economically more sustainable. **[Public university]**

Longitudinal assessments

Twenty-four respondents completed the Survey of Sustainability in Education Abroad in 2021 and 2023, including 5 community colleges, 7 private universities, 8 public universities and 4 third-party program provider organizations. The trajectory of their responses to repeat questions from both surveys are illustrated below. This information is meant to show how institutions/organizations are advancing sustainability efforts – or not – with regards to student mobility.

Several repeat questions from 2021 to 2023 have slightly different answer options. This was done to better simplify answer options in 2023, based on respondent feedback from 2021. The analysis below is based on the same, or most similar, answer options provided by each of the institutions/organizations from 2021 to 2023. Respondents that indicated "N/A" are not included in progress/regression.

PUB = Public University	**CC** = Community College
PRV = Private University	**TPPP** = Third-Party Program Provider

NOTABLE RESULTS

There are not any significant performance indicators from 2021 to 2023 that are unique to a certain institutional or organizational type overall. After tallying the weighted numerical values of each repeat question from the 2021 and 2023 surveys, the most progress regarding sustainability performance is by a small community college in New York, U.S.A. and by a fairly large margin. A large public university located in Texas, U.S.A. and a third-party provider program based in the U.S.A. also showed a lot of progress across all indicators, but only at about half the rate of the community college. Further rankings demonstrate that both progress and regression by repeat respondents is being distributed amongst all institutional and organizational types.

The largest gains (i.e. progress) made by repeat respondents include embedding environmental sustainability into program design (community college, New York, U.S.A.), the percentage of programs with the terms "Environmental Sustainability", "Social Sustainability", "Climate Change", and/or "U.N. Sustainable Development Goals" into education abroad programs (private university, Jalisco, Mexico) and a reduction in perceived barriers (community college, New York, U.S.A.). The largest losses (i.e. regression) made by repeat respondents include embedding environmental sustainability into program design, the percentage of programs with the terms "Environmental Sustainability", "Social Sustainability", "Climate Change", and/or "U.N. Sustainable Development Goals" into education abroad programs and a reduction in perceived barriers – all by one public university located in California, U.S.A.

The largest variance, including the range of scores, reflecting progress vs. regression is with regards to perceived barriers to implementing sustainability into programming and the smallest variance is with regards to efforts to track both flight and ground emissions by students, faculty and staff.

Sustainability performance increased, but by less than 10% overall, amongst repeat respondents from 2021 to 2023.

Appendix

Appendix

I. Environmental sustainability is explicitly embedded into (Figs. 6-10)

Additional Comments from Respondents

"[Our Provider's] focus on sustainability is just beginning. While not explicitly detailed in mission, goals, and objectives, it is something that will be discussed heavily when those are revisited."
[Third-party program provider]

"Our whole business is focused on climate action and it informs every aspect of our work."
[Third-party provider organization]

"We are currently implementing a measurement tool to capture student air miles travelled and in-country miles for program requirements. In pre-departure advising, we recommend that students mind their emissions. The only way that funding requests explicitly embed sustainability is by favoring longer-term programs." **[Private university]**

"We do have a sustainability committee that works on campus projects but not related to study abroad."
[Community college]

"Our university has goals and objectives but it is not explicit how those fit with the work of our [Global Programs] office." **[Private university]**

"We have included it as a theme included in a grant proposal for study abroad." **[Technical college]**

"Sustainability is embedded in all we do as it's the core of our work and organizations' ethos."
[Third-party provider organization]

"Environmental sustainability is highly considered at the [university]." **[Public university]**

"We have intention of integrating sustainability into our operations, but in process currently."
[Private university]

"[Public university] Global Engagement has recently implemented a Sustainability Project Committee that includes, Global Engagement, International Student and Scholar Services and Education Abroad. The committee is in the first round of setting preliminary goals and guidelines for the offices under Global Engagement, outbound students, and inbound internationals to [university]." **[Public university]**

"We are a new university thus some of our areas are under construction." **[Private university]**

"With stations and research centers in some of the most biodiverse areas of the world (Galapagos Science Center, Tiputini Biodiversity Station and Tandayapa Cloud Forest Station), we are committed to climate action and to pursuing and implementing sustainability strategies." **[Private university]**

"[University] has not contemplated initiatives with regard to the environment and education abroad."
[Public university]

"Environmental sustainability is embedded into the institution's goals, as the university aims to be carbon neutral by 2040." **[Public university]**

"We have just begun working towards sustainability integration this past summer and are working to bring plans into action." **[Private university]**

"Our policies and procedures are lagging behind the present discussions. But implementation is imminent."
[Public university]

"Sustainability is poorly articulated in our strategic plan, but several faculty members have taken it on as a priority." **[Private university]**

"Currently, the college is not focused on issues related to Environmental Sustainability."
[Community college]

"Sustainability is a strategic priority of the college. A faculty line has been created and filled to teach sustainability courses (ECON). Funding has been pledged for sustainability initiatives. Depts. are being asked to report sustainability activities (e.g. my unit reports study abroad with sustainability curriculum). In terms of policy, Recycling and energy conscientiousness is encouraged. Consideration of diversity in purchasing is encouraged." **[Public university]**

"We are collecting data regarding our internationalization at home results." **[Private university]**

"Only in the university's mission is it explicit." **[Public university]**

II. Environmental sustainability initiatives are currently being achieved (Figs. 11–15)

Additional Comments from Respondents

"Some data collection will be underway in the coming weeks, but not currently achieving much outside of the curriculum." **[Private university]**

"Study abroad is not involved with sustainability but we do have a mission on campus to be sustainable." **[Community college]**

"I'm not really sure how to measure whether the university is achieving its goals, they are surely in progress but not completed." **[Private university]**

"We have NOT achieved all our goals, but they are all on their way." **[Third-party provider organization]**

"Environmental sustainability is part of the General Strategic Work Program at the institution." **[Public university]**

"These initiatives are part of the outcomes that will derive from the aforementioned committee." **[Public university]**

"[University] has an Office of Innovation and Sustainability (OIS) that aims to carry out initiatives and projects oriented towards sustainability in various spheres on and off campus, all under the Smart Campus initiative. In addition, 7 of our research institutes are oriented towards sustainable development (IDEMA, INME, CATENA–[university], ISC, IIA, BIOSFERA, ECOLAP)." **[Private university]**

"The university is currently ahead of schedule in its goal to be carbon neutral. Many items of data collection are electronic instead of paper based now." **[Public university]**

"We are working towards policies designed to embed sustainability principles into our Learning Abroad opportunities. Our most recent funding proposals have looked specifically for support in this regard." **[Public university]**

"Beginning to make progress in all of these areas but of course have a long way to go." **[Public university]**

"We're making progress, but I wouldn't say we've accomplished much. The college as a whole has other priorities." **[Private university]**

"Currently, the college is not focused on issues related to Environmental Sustainability." **[Community college]**

"Our entire organization, [Public university], has achieved SDGs in some departments/offices, but not completely throughout all policies/roles/assessments, etc." **[Public university]**

"We have a sustainability committee and director buy-in but no specific organizational mission/objectives or policies." **[Public university]**

III. Efforts are made to account for Scope 3 travel-related emissions for staff, faculty and/or students (Figs. 16-31)

Additional Comments from Respondents

"We track our emissions for participant's flights since 2015 and offset them with a third party verified agency annually. We are in the process of tracking our on-ground emissions on our programs." **[Third-party provider organization]**

"To begin in June for the 23/24 fiscal year." **[Third-party provider organization]**

"We track and have reduction targets for staff aviation emissions. Our focus is more on flights as we have minimal ground travel. Student programs are run virtually to eliminate most emissions and we track the amount of flight emissions avoided by participation in our programs (an average of – 6,300 kg (6.3 tonnes) per student." **[Third-party provider organization]**

"My answers are for Off-Campus Study. [University] does track this institutionally." **[Private university]**

"We do not tax, but we internally mitigate emissions and outsource those that cannot be inset. But we absorb its costs." **[Third-party provider organization]**

"We recommend carbon offset donations for all study abroad students. There is a graduate student group currently identifying the university's carbon footprint for all student, staff and faculty travel and communicating." **[Private university]**

"This is something we are working on including as part of the committee outcomes." **[Public university]**

"A small group of students (around 60) pay a carbon tax. Those students are part of the Sustainability Cohort, students working on sustainability/climate projects abroad." **[Private university]**

"An campus-wide Air Travel Committee has been working this past year to recommend sustainable practices as part of an institutional action plan. Study abroad is represented on this committee." **[Public university]**

"Our university participates in carbon on-setting and off-setting for Scope 3 emissions, of which student flight emissions for Education Abroad are included." **[Private university]**

"We are working towards a carbon offset plan for all student travel which would include a system for voluntary offsets for faculty and staff." **[Private university]**

"This is specifically for business travel, not flights but trains." **[Third-party provider organization]**

"We don't believe there's currently a carbon tax at our university but are not 100% sure." **[Public university]**

"Information gathering work in progress by the sustainable transition department." **[Public university]**

"Currently, the college is not focused on issues related to Environmental Sustainability." **[Community college]**

"We intend to continue dialogue with university study abroad director and university sustainability office to improve practice in these areas." **[Public university]**

"Folks can opt into a carbon offset program for commuter travel. We can't use state funds for carbon offsets for faculty/staff/student travel but we are trying to find innovative ways to implement a program." **[Public university]**

IV. Primary purpose for faculty travel (Fig. 35)

"Other" Details from Respondents

"Program promotion, assessing/evaluating programs, exploration for new programs." **[Private university]**

"We have one program that runs on a visiting faculty-director model. Other faculty often travel for site visits and conference work or research." **[Private university]**

"Research" **[Public university]**

"Research" **[Public university]**

"Domestically for professional development." **[Technical college]**

"Research" **[Private university]**

"Unknown the primary purpose for faculty traveling." **[Public university]**

"A combination of all of the above." **[Private university]**

"Faculty travel for multiple reasons and some travel more than others. Reasons may be to lead groups, partnership development, program design, and research." **[Private university]**

"Research collaborations." **[Public university]**

"They only travel to teach courses abroad when applicable--not to promote education abroad." **[Public university]**

"Research, directing programs, participating in scholarly projects/conferences." **[Private university]**

V. Primary purpose for staff travel (Fig. 37)

"Other" Details from Respondents

"Assessing/evaluating programs, familiarization with programs for advising and oversight." **[Private university]**

"Faculty Development" **[Community college]**

"A combination of all of the above." **[Private university]**

"Familiarization, promotion, partnership development, program design, etc. Also, to clarify, we selected 3-5 times per year in the question above, which is all staff members together, not individually." **[Public university]**

"Oversight of international programs." **[Third-party provider program]**

"Support teaching and wellness of student groups." **[Public university]**

"Recruitment" **[Public university]**

VI. Environmental sustainability is a factor when designing programs (Figs. 38-43)

"Other" Details from Respondents

"This question is a time bomb. Hard to ask this of universities when the principal study abroad organizations are hesitating to move away from annual international meetings and to promote virtual alternatives. One must go abroad to study abroad. Meetings can be virtual." **[Private university]**

"We encourage participation on mid- and long-term programs rather than short term, and we also implement virtual exchange programs, but none of the above are done based on a sustainable policy or program." **[Private university]**

"We do not design our own programs." **[Private university]**

"We try to partner with organizations that include sustainability in their approach, for example the School for Field Studies, rather than designing our own new programs, as this is more efficient."
[Private university]

"Virtual exchanges with Argentina in past and Bordeaux, France currently." **[Technical college]**

"We are working on a faculty guide to sustainable program development and will include sustainability questions in program evaluations as well as new program proposals. These are set to be implemented by Fall 2024." **[Private university]**

"Virtual program launched during the pandemic that did not generate the desired interest. It was therefore cancelled." **[Public university]**

"We designed a green travel manual for faculty and students." **[Public university]**

"All travel from NZ requires travel of at least three hours by plane." **[Public university]**

"International summer program (jointly taught be visiting professor and home professor on campus); Intercampus Ausjal Virtual." **[Private university]**

VII. Percentage of programs that have sustainability themes (Figs. 44–47)

"Other" Details from Respondents

"I'd need to survey the various partners with whom we work." **[Private university]**

"Environmental sustainability isn't 0, but it's closer to 0 than 25." **[Third-party provider organization]**

"We send many students on other institutions'/providers' programs that have these terms in their titles/ descriptions, but I answered the question for our own programs only." **[Private university]**

"Our main program is the Climate Action Virtual Internship. We do bring in the SDGs as a framework and present SDG 13 in that broader context, as well as covering issues of climate justice." [Third-party provider organization]

"I'd say between 10-15%." **[Private university]**

"Many programs include SDGs but not in their titles. Climate change might be closer to 5%." **[Private university]**

"25% if receive IDEAS grant for 2023." **[Technical college]**

"No study abroad programs." **[Community college]**

"[University] students travel abroad to intern, research and teach. Their activities are classified under "sustainability / Climate" if the activity abroad can be classified as such using SGDs." [Private university]

"5-10% all topics combined." **[Public university]**

"These estimations are approximate. There are probably fewer than 25%, but more than 0% for all of them." **[Private university]**

"A small percentage (5%) have these terms in their titles, however, students can participate in a number of courses with these in their descriptions or titles." **[Private university]**

"Our programs are not likely at 0% specifically. However, not at 25% so selected 0." **[Public university]**

"Too many programs are offered to span a jump between 0-25%." **[Public university]**

"Our two flagship semester programs (Rome and Tokyo) both offer "Sustainable Environments" classes, but these terms are not included in any program titles/descriptions." **[Public university]**

"Not limited to environmental issues though." **[Community college]**

"Environmental sustainability is embedded within our Dublin program, but it is not in the title, nor is it part of the curriculum. It is just something we do with the students on-site. Other abroad opportunities do not do this, yet." **[Private university]**

"We do have some programs that both focus on sustainability or have courses that teach about it but with the large number of programs, the % is small. Focus = 2 of 40+ and with courses = 10 of 40+."
[Public university]

"Sustainable business" **[Public university]**

"Approximately 10% of programs include terms related to Environmental and social Sustainability and climate change. No programs related to SDGs." **[Public university]**

VIII. Topics addressed in pre-departure materials and orientations (Figs. 50-54)

"Other" Details from Respondents

"These are addressed and unpacked on the program but not as much on orientation or pre-program materials." **[Third-party provider organization]**

"None of this is required yet. Also, the UN SDGs are so internally inconsistent and SO numerous (including all of their subcategories), that they are not useful beyond demonstrating the internal inconsistency to students. Study abroad outfits could/should do a better job critiquing them instead of mindlessly celebrating them." **[Private university]**

"Consideration is being given as we build out our pre-departure sustainability session."
[Third-party provider organization]

"All students submit program evaluations but of programs operated by other partners, not [our university]."
[Private university]

"Again, SDGs will be part of trips funded by IDEAS grant." **[Technical college]**

"All semester/academic year students receive this information as a part of their mandatory pre-departure orientation." **[Private university]**

"We address certain topics related to the cultural, environmental and social context." **[Public university]**

"Packing light, buying green (greenwashing), transportation choices, waste reduction, food choices, reflection, and post-trip actions." **[Public university]**

"Laudato Si framework is a consideration." **[Private university]**

VIX. Topics addressed during the program abroad (Figs. 55-59)

"Other" Details from Respondents

"If they are on ES-related programs, or DIS, for example---they may be encouraged to do these things." **[Private university]**

"Public transportation/ walk-in used exclusively in consortium trip to Bordeaux. Have included community-engagement in proposal for IDEAS grant." **[Technical college]**

"Embedded in service learning abroad programs." **[Community college]**

"Internships with environmental NGOs are provided." **[Third-party provider program]**

"This varies by programme." **[Public university]**

X. Efforts are made to support the local community/economy abroad (Figs. 64-69)

"Other" Details from Respondents

"We are a university-member organization and thus they have a wide variety of sustainability policies." **[Third-party provider organization]**

"Our program operates in multiple countries so we don't hire facilitators specifically from any one destination country, but we do aim for diversity among the speakers, and multiple perspectives." **[Third-party provider organization**]

"For some faculty led-programs we do hire local experts to provide curriculum to students." **[Community college]**

"It depends on the program, most are organized by third parties so it's not the same across the board." **[Private university]**

"Local faculty is hired in Bordeaux and we visit local vineyards and markets. The rest is considered as part of our IDEAS grant proposal." **[Technical college]**

"Recycled & filtered drinking water available instead of bottled water." **[Third-party provider organization]**

"We're considering a couple of activities offered by a provider who uses proceeds toward sustainability education in local schools." **[Public university]**

"This varies by programme (e.g. not when this is a semester exchange with a uni partner)." **[Public university]**

XI. Perceived barriers in implementing sustainability within programming (Figs. 71-80)

"Other" Details from Respondents

"Lack of staff time – one person service." **[Public university]**

"This is a contested issue because people MUST invest in sustainability. It will be expensive. Also, it challenges the basic and foundational vision of US higher ed starting w/ international and nationwide recruiting. If all universities recruited locally, this would radically decrease the carbon footprint. But, that runs up against diversity efforts…" **[Private university]**

"The Australian government program that funds international mobility, The NCP, has been sending mixed messages about whether they will continue to support virtual programs and this has caused some issues. The universities we work with (in Australia and NZ mainly to date) are very keen to keep virtual internships in the mix but are sometimes stymied by this government stance." **[Third-party provider organization]**

"Study abroad duties are a very small part of my job. I don't have time to collaborate with sustainability committee for study abroad." **[Community college]**

"We are a 1.5 staff sending 300+ students abroad/year---so staffing." **[Private university]**

"Our office is a 1.5 person office and recently underwent a leadership transition, so there has been a bit of a delay in considering and implementing sustainability goals. Given our limited human capital, implementing sustainability goals can compete for other goals of the office given the time we have available." **[Community college]**

"I do not believe student, staff, or unit (Internationalization) interest in incorporating sustainability into our programming is an issue. However, broader direction (university-level), and incorporation with Sustainability + funding are the biggest challenges to implementation. More direction is needed."
[Public university]

"We interpreted this question as having to quantify how much of a barrier we face for each question. If the question was intended in a different way, please adjust accordingly." **[Public university]**

"The institution as a whole are not committed, but the abroad staff in Dublin, and our students, are committed." **[Private university]**

"The cost of sustainable initiatives can be prohibitive, e.g. solar panels."
[Third-party provider organization]

"We also have to consider external interest such as industry and alumni boards." **[Public university]**

"Administrative hurdles. Unclear policies at home institution about carbon mitigation." **[Public university]**
